The submitted manuscript is my long-term observation of mangrove growth rates in tropical condition of bunaken national park. Mangrove growth rates are important to understand biology and physiology, responses of mangrove species to changes in site condition, key data of demographic processes to investigate the development of mangrove forests, and so on. I am hoping that the manuscript can be considered to be published in Biodiversitas Journal.

Best regards,

Rignolda Djamaluddin

Dear, Dewi Nur Pratiwi

I thank you very much for the quick response on my **manuscript**. I will revise the **manuscript** as recommended.

best regards,

Rignolda Djamaluddin

editors@smujo.id

Reviewer S:

The research objectives and methods in the abstract need to be clarified

Recommendation: Revisions Required

Reviewer V:

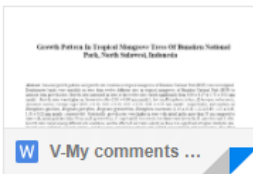

Dear Author

1. The study is interesting and produce many data, but it needs revision and some additional analyses.
2. Please revise as of my comments are given in the text of manuscript.
3. The author need to add more analysis for describing the growth pattern of mangroves trees, such as relative growth of stem and height, and growth curve analyses to get in more biological meaning of growth pattern.
4. Establish statistical analyses of stem growth rate, height growth rate and RGR of both parameter for each mangrove species among sites, and whole species.
5. Add more references as of many new published papers that studied from other part of Sulawesi Island

Best regards

Dear Editor

I thank you very much for the information. I will be working through all notes on revised documents, and will be sent the revised version sooner.

cheers,
Rignolda

Reviewer Q:

Present paper deals with growth papern and growth rate of several species thrive in Bunaken National Park.

Major comments

- For some issues, see in the text for my comments
- The growth rate of this study showed differently to other studies, the authors only argued due to the local condition. How the local environment and climatic play important role to plant growth?
- The authors measured the plant growth from 1999 to 2001 and then continue to 2014 to 2016, why the author did not separate the results 1999 to 2001 from 2014 to 2016, then compare? however, the authors combined into one data to be 59 months, what is the consideration? Becuase there is gap no measurement between 2002 to 2013.

Dear, Editor

Attached file is the revised version of my **manuscript** titled " Growth Pattern In Tropical Mangrove Tress Of Bunaken National Park, North Sulawesi, Indonesia".

Overall, I really appreciate to all reviewers' comments and suggestions. I have tried the best I could to make revision on the **manuscript**, and to be honest it was not easy and took times. Generally, I agree with reviewers' comments for most of technical and systematic appearances, incomplete information, and spelling corrections throughout the script, specifically in Abstract and Methods. I also agree with one of the reviewer who suggested to analyse the differences in growth rate among individual trees (with different sizes - Relative Growth Rate) of the same species, and the result of analysis was integrated in the related Table 2. In the case of discontinuous data, I think it is not the reason to do comparison analysis between the two periods of observation because the sample trees still the same, and temporal/seasonal analysis of stem growth rates (in Figure 4) might show clearly the differences in growth dynamics over time.

Best regards,

Rignolda Djamaluddin

Dear, Mr. Ahmad Dwi Setyawan

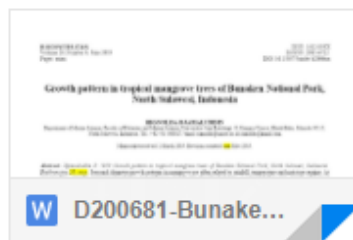

I have been reading through the **manuscript** with only two corrections: 1) In Header, Djamaluddin **et al** ----without et al,

2) In page 2, line 2; (Davie and Djamaluddin 1996, 2004), it was corrected to be "(Davie and Djamaluddin 1996; Djamaluddin 2004). The remaining parts, are all fine. It is also informed that the billing for the **manuscript** publication was paid this morning and the proof had been sent to Dewi Nur Pratiwi. I thank you very much for the consideration in publishing my **manuscript** in Biodiversitas journal.

Best regards,

Rignolda Djamaluddin
