### ABSTRACT

**Received:**

**Accepted:**

**Keywords:**

*diversity, polyculture, forest, sustainability, earth, and human life*

The condition of farmers living around forests and adhering to simple and traditional lifestyles cannot be underestimated. They possess the resilience to adapt to the continuous natural rhythm. Farmers have succeeded in building forested yards and gardens through solidarity and adherence to the natural rhythm, which becomes their property. The proliferation of small forests by forest-dwelling farmers results in a greener and more diverse earth, thereby supporting the sustainability of human life. Therefore, this research aims to discuss how local communities learn and apply diverse crop patterns in areas near the protected forest. The qualitative research was conducted in Barangkalang Village, Manganitu Sub-district, Sangihe Islands District, North Sulawesi Province. Forest farmers have the right to cultivate yard and garden forests based on their subconscious. This can result in small forests resulting from the irregular growth of plants and animals into small forests. However, such an occurrence should not be considered a farming failure as farmers have a hereditary copyright that must be respected. Additionally, it is crucial to preserve this balance by avoiding the introduction of external technology and ideas.

Your paper is Accepted with Minor Revision

The reviewers recommend you:

Reviewer #1:

The topic is interesting and important. However, there are several key areas that need more work.

- 1 - Please add the novelty of the results to the abstract (2 sentences).
- 2 - Authors should explain better the criteria for selecting the research object and the limitations of the application of the results obtained should be specified.
- 3 - Much more explanations and interpretations should be added to the result. It is suggested to compare the results of the present study with previous studies and analyze the results completely.

Reviewer # 2:

- 1 - The Conclusion section needs to justify the effectiveness of the approaches you propose (100 WORDS).
- 2 - Please cite sources under the tables and figures. If they were developed by the authors, indicate "developed by the authors".
- 3 - Please shorten the old sources in the reference. The recommended number of references is 20-25 entries. If possible, the authors should use relevant sources on the research topic from the last 3-5 years.

Please consider the reviewer's comments, and revise that as soon as possible.

Deadline for providing revised article and payment: December 25 July, 2023.

The article will be published until January 30, 2023.

# The Power of Life Following Natural Rhythm: How Gender Solidarity Transforms Homegardens and Farming Lands into Small Forests

Eisje Pauline Manginsela, Dedie Tooy, Frangky J. Paat, Rilus A. Kinseng, Rudy Pramono, Miranda E. Thomas, Martha Marejke Sendow, Christine F. Mamuja, Oktavianus Porajouw, Ruland A. Rantung, Franda B. Paat, Samuel P. Ratag, Raymond C. Kawet

## Abstract

The conditions of farmers living around forests and adhering to simple and traditional lifestyles cannot be underestimated. They possess the resilience to adapt to the continuous natural rhythm. Farmers have succeeded in building forested yards (*pekarangna rumah* or homegarden) and gardens (*kebun* or cultivated/farming land) through solidarity and adherence to the natural rhythm, which becomes their property. The proliferation of small forests by forest-dwelling farmers results in a greener and more diverse earth, thereby supporting the sustainability of human life. The novelty of this research is finding simple ways of farming and collecting forest products to meet daily needs and gain income without exploiting the forest. Therefore, the forest can be sustainable. The qualitative research was conducted in Barangkalang Village, Manganitu Sub-district, Sangihe Islands District, North Sulawesi Province, Indonesia. Forest farmers have the right to cultivate yard and garden forests on the basis of their subconscious. This can result in small forests due to the irregular growth of plants and animals in small forests. However, such an occurrence should not be considered a farming failure because farmers have a hereditary copyright that must be respected. In addition, it is crucial to preserve this balance by avoiding the introduction of external technology and ideas.

## Abstract

The conditions of farmers living around forests and adhering to simple and traditional lifestyles cannot be underestimated. They possess the resilience to adapt to the continuous natural rhythm. Farmers have succeeded in building forested yards (*pekarangna rumah* or homegarden) and gardens (*kebun* or cultivated/farming land) through solidarity and adherence to the natural rhythm, which becomes their property. The proliferation of small forests by forest-dwelling farmers results in a greener and more diverse earth, thereby supporting the sustainability of human life. The novelty of this research is finding simple ways of farming and collecting forest products to meet daily needs and gain income without exploiting the forest. Therefore, the forest can be sustainable. The qualitative research was conducted in Barangkalang Village, Manganitu Sub-district, Sangihe Islands District, North Sulawesi Province, Indonesia. Forest farmers have the right to cultivate yard and garden forests on the basis of their subconscious. This can result in small forests due to the irregular growth of plants and animals in small forests. However, such an occurrence should not be considered a farming failure because farmers have a hereditary copyright that must be respected. In addition, it is crucial to preserve this balance by avoiding the introduction of external technology and ideas.
